## RESIN FLOORS

Jigsaw Foods Ltd

320 m2

Polyurethane Screed, 9mm

The project involved the removal of the existing PU screed, which had significantly deteriorated, exposing areas of unsound substrate. Once stripped back to a stable base, the existing drainage was broken out and replaced with new, fit-for-purpose stainless steel channels designed to meet hygiene and durability standards. Following the installation of the drainage system, the substrate was primed in preparation for the application of a high-performance 9mm PU screed. Perimeter coving was formed in-situ, and all necessary joints were installed to ensure a seamless, durable finish suitable for the facility's demanding environment. To minimize disruption to the 24/7 production schedule, the entire project was carefully phased and completed over four shifts, ensuring minimal downtime for the operational site.
